

CONGRESS CONFERENCE SOLUTION

INTELLI.CCS Congress Conference Solution is a multi-functional software/hardware conferencing solution that enables to configure, manage and personalize all aspects of conference systems.

INTELLI.CCS is a modular Congress Conference Solution which can be configured and customized to specific clients needs.

It's main building blocks are:

- **CCSserver**, conference management software
- **CCSpanel**, 7" touch module on for conference systems

INTELLI.CCS main features:

- Microphone management
- Delegates management
- Meetings/session management
- Voting management
- Video streaming management
- Camera control management
- Data content management (PDF files, data charts)

CCSserver:

Is a server based conference management software providing full control over Conference and Voting systems and procedures.

CCSserver provides:

- Full control of cameras and streaming of speaking delegate video and distribution of content such as agenda, PDF file, data charts,...
- Full voting management control which includes different voting „scenarios“ (1/2, 3/4 present delegates, secret voting), calculate voting results on the fly, prepare results in pie charts/data charts, stores and results and session data to database,...
- Full microphone management including automatic, manual, FIFO mode,...
- Logs for all user/delegate actions with system for analyses

CCSpanel:

Is multimedia conferencing solution module, designed for Flash mount conference systems. CCSpanel is a Flush mount 7" touch screen unit configured with either a delegate or a chairman functionality and provide access to: active speaker live video stream, delegate information (last speaker list, request to speak list, ...), agendas, timers (speaking time, remain speaking time), voting information (individual results, total results, charts, ...).
